

Digital Signatures and Public Key Infrastructure

Dr. Balaji Rajendran

Centre for Development of Advanced Computing (C-DAC)
Bangalore

Under the Aegis of

Controller of Certifying Authorities (CCA)
Government of India

Agenda

- ✓ What & Why: Digital Signature?
- ✓ What is Digital Signature Certificate?
- ✓ Achieving Confidentiality
- ✓ Certifying Authority & Trust Model
- ✓ Certificate Issuance, Types, Classes
- ✓ Certificate Life Cycle Management and Validation Methods
- ✓ Risks and Precautions with DS
- ✓ Policy and Legal Aspects of PKI
- ✓ e-Sign – An Instant & Online way of Digital Signing in India
- ✓ PKI Applications in India

Understanding Signature

- Hand-written Signature – Definition & Purpose
 - A person's name written in a distinctive way as a form of **identification** in **authorizing** a cheque or document
 - A distinctive pattern, product, or characteristic by which someone or something can be **identified**

Characteristics of Hand Signature

- A *Hand Signature* on a document is
 - a **unique pattern** dependant on some secret known only to the signer and
 - **Independent of the content** of the message being signed

My Signature

MICKEY MOUSE

Attacks on Hand-written Signatures

- **Attacks on Integrity**
 - Content Alteration / Corruption !
- **Attacks on Identity**
 - Impersonation
 - How is Identity verified?
 - Authentication – Process of verifying who somebody is against his claim
 - Identity is established / proved through Authentication!

Attacks on Integrity

Attacks on Identity

Breach of Authenticity

Basic Elements of Trust

- **Privacy (Confidentiality):** Ensuring that **only authorized** persons read the Data/Message/Document
- **Authenticity:** Ensuring that Data/Message/Document originated from the **claimed** signer / sender
- **Integrity :** Ensuring that Data/Message/Document are **unaltered** by any unauthorized person
- **Non-Repudiation:** Ensuring that one **cannot deny** their signature or origination of a message

Digital Signatures

What is a Digital Signature ?

- A *Digital signature* of a message is a **number (fingerprint)** dependent on
 - a secret known only to the signer **and**
 - the content of the message being signed

- Properties of Signatures
 - Verifiable
 - Provides Authentication
 - Provides Data Integrity
 - Provides Non-repudiation

```

Creating Digital Signature

- Every individual is given a pair of **keys**
 - *Public key*: known to everyone
 - *Private key*: known only to the owner
- To *digitally sign* an electronic document the signer uses his/her *Private key*
- To *verify* a digital signature the verifier uses the signer's *Public key*

Asymmetric Key Cryptography

- Keys in a Key pair are mathematically related to each other
 - If one of the key in a key pair is used for Encryption (or Decryption) then the other key should be used for decryption (or Encryption)
- Also known as **Public Key Cryptography**
- Knowledge of the *encryption key* doesn't give you knowledge of the *decryption key*

Computationally Infeasible

What is a key pair?

Private Key

PKI Knowledge Dissemination Program

Digital Signing – Step 1

This is an example of how to create a message digest and how to digitally sign a document using Public Key cryptography

Hash Function

- A hash function is a cryptographic mechanism that operates as **one-way** function
 - Creates a digital representation or "fingerprint" (Message Digest)
 - **Fixed size output**
 - Change to a message produces different digest

Examples : MD5 , Secure Hashing Algorithm (SHA)

Hash - Example

Hi Jai,
I will be in the park at

I am a Engineer.

01f1d8abd9c2e6130870842055d97d315dff1ea3

- These are digital signatures of same person on different documents
-

- **Digital Signatures are numbers**
 - **They are content and signer dependent**
-

Digital Signatures - Recap

- Establishes
 - **Identity and Authenticity** of the Signer
 - **Integrity** of the document
 - **Non-Repudiation** (inability to deny being signed) to a **certain extent**
- General Conventions
 - **Signing** – **Private Key** of the Signer
 - **Verification** – **Public Key** of the Signer

Digital Signature Certificate (DSC)

Why do we need DSC?

- To firmly establish the ownership of public key
- To certify and provide a strong mechanism for non-repudiation (to inability to deny)

What is Digital Signature Certificate (DSC)?

DSC is an **electronic document** used to prove ownership of a public key. The certificate includes

- Information about its owner's identity,
- Information about the key,
- The Digital Signature of an entity that has verified the certificate's contents are correct.

Digital
Certificate

Certifying Authority (CA) ?

Certifying Authority (CA)

- Certifying authority is an entity which issues Digital Signature Certificate (DSC)
- It is a **trusted third party**
- CA's are the important components of Public Key Infrastructure (PKI)

Responsibilities of CA

- Verify the credentials of the person requesting for the certificate (RA's responsibility)
- Issue certificates
- Revoke certificate
- Generate and upload CRL

Sample Certificate

Certificate [?] [X]

General | Details | Certification Path

 **Certificate Information**

This certificate is intended for the following purpose(s):

- Ensures the identity of a remote computer
- Proves your identity to a remote computer
- Protects e-mail messages
- Ensures software came from software publisher
- Protects software from alteration after publication
- Allows data to be signed with the current time

* Refer to the certification authority's statement for details.

Issued to: Rajendran Balaji

Issued by: NIC sub-CA for NIC 2011

Valid from 2/24/2014 **to** 2/23/2016

 You have a private key that corresponds to this certificate.

Digital Signatures and PKI - II

Over to Mr. Subhrakanti Kaviraj

Conclusion

- PKI and Digital Signatures have been transforming the way traditional transactions happen
- PKI Ecosystem has the potential to usher
 - Transparency
 - Accountability
 - Time, Cost & Effort-savings
 - Speed of execution and to be an integral part of
 - **Digital India and bring in Digital Identity**
